

This is Primarily a Sinden build, but should work with most other guns. (Aimtrak and Gun4IR been tested) Bigbox can be fully controlled with sinden gun. Other guns use a keyboard

.....

Install guide

(Windows 10 or 11)

(There is also the Video Install Guide,go over this and that as well)

0. If your computer never had Launchbox installed, install launchbox and download all files it request. (Uncheck install bing bar when ask) this will ensure your computer will have the files to launch this build.(you can delete Launchbox after the install and should also take care of net framework and C++ update as well)

1. Unzip "UncleRick.zip" anywhere

2. Open extracted folder and move "UncleRickLightgunBuild" to the root of a drive. (UnleRick is defaulted to the D drive but any drive will work, follow video in Guides if you put it on a different drive)
3. Have gun(s) plugged if not already. If Sinden program are running, close them.
4. Open Launchbox.exe, close the sinden programs when they come up.
5. Set camera permissions & mouse settings
(watch enclosed video in Guides)
6. Setup Gun ID in gunmouse.cfg
(Watch video in Guides)
7. Setup Guns with Demulshooter
(Watch video in Guides)

7a. If you put your drive on a Drive not D, you'll need change letter drive in Demul.
(Watch video in Guides)

8. Set P1 gun up with Sinden
(Watch video in guides)

9. Set P2 gun up with Sinden
(Watch video in guides)

9a. If you're not running Sinden you can turn off Sinden program from launching as well as turning off borders
(Watch video in guides)

10. Start a Sega Model 2 game, if you receive a could not find "d3dx9" error, goto "Tools" and click "DirectX Update" tab, during download unclick "install Bing bar" unless for whatever reason you want it. If game starts then ignore DirectX update step.

(If you get cannot find naomi bios error,

make sure you watch the 2 videos in tools on changing your drive, if you have this on a Drive that's not "D"

10. Enjoy the Build

.....

Notes:

-If American Laser Games and/or Sega Model games give you issues, update the C++ and Net Framework
(Video in Guides to show how)

-UncleRick is meant as a standalone. No support will be given to adding more roms. Proceed at your own risk in adding more.

-to have the fully loaded UncleRick follow my YouTube channel playlist linked in Tutorials & Guides to learn how to build it.

-for sinden users, best result to setting up to your TV is turning your TV "Backlight" to max or close if you have that option on

your TV model. Even if it's in Game Mode, backlight may not be bright enough.

-Build is Bigbox ready, but you need to supply your own license. Also, playable on free Launchbox but for Sega Model 2 and Maybe the Naomi titles, the mouse shows. To bypass the mouse, use paid Bigbox.
